a
cells called malignant (%)
healthy
inflamed, tumor-free
infercnvpy (copy-number method)
ikarus (trained classifier)
CopyKAT (copy-number method)
bone marrow
kidney
large intestine
liver
lung
pancreas
skin
small intestine
spleen
stomach
colon (colitis)
skin (psoriasis)
colon (Crohn's, epithelium)
colon (Crohn's, immune)
b
cells wrongly called malignant, all datasets (%)
no normal reference
immune cells as reference
n.d.
forced 2-group split
highest-scoring cluster
cutoff from normal cells
2-criterion rule (Tirosh)
c
cells
cutoff from normal cells
6.3% of cells fall above it
copy-number score per cell (log10)
