a
13 datasets (psoriasis: see c, d)
rate = α
cell type
archetype
(no cell-type labels needed)
cells wrongly called (%)
nominal level, α (%)
b
cell type
archetype
bound, BH per dataset
bound, BH per donor
datasets with any false call (%, of 13)
nominal level, α (%)
c
published cutoff rule (Tirosh)
empirical null + BH, α = 5%
reference from other tissues fails on this dataset
wrongly called cells (%)
bone marrow
kidney
large intestine
liver
lung
pancreas
skin
small intestine
spleen
stomach
colon (colitis)
skin (psoriasis)
colon (Crohn's, epi.)
colon (Crohn's, imm.)
d
reference: other tissues
reference: other donors, same dataset
α = 5%
wrongly called cells (%)
skin (psoriasis)
liver
large intestine
lung
spleen
pancreas
colon (Crohn's, imm.)
skin
bone marrow
colon (Crohn's, epi.)
small intestine
stomach
colon (colitis)
